

INDUSTRY PROBLEM-SOLVING TASK

Java AWT, Applets, Event Handling and Layout Managers

Name of the Student	V.Bala Siva Prasad Reddy	Register No.	192424316
Programme / Section	AI&DS	Date	22/08/2026
Course Code	CSA0905	Course	Programming in Java
Faculty	Dr. Sivasankar C	Duration	Lab Session

INDUSTRY TASK 2: Online Food Ordering and Billing System

Problem Statement: A restaurant wants to develop a simple Food Ordering and Billing Application for its counter staff. The application should allow customers to select food items, specify quantities, and generate a final bill.

Functional Requirements

- Develop the application using Java AWT.
- Create fields for Customer Name and Table Number.
- Provide Food Category, Food Item, and Quantity selection using appropriate AWT components.
- Provide Add Item, Generate Bill, Clear, Next, and Previous buttons.
- Display selected food items in a List or TextArea.
- Calculate item-wise cost, Subtotal, GST, and Final Bill Amount.
- Implement button click events using ActionListener.
- Use CardLayout to create separate screens for Customer/Order Details, Food Selection, and Bill/Order Summary.
- Validate quantity and ensure that an item is selected before adding it to the order.

Industry Context: The application represents a simplified restaurant POS (Point of Sale) system used for taking customer orders, processing prices, and generating a customer bill.

Expected Deliverables

- Java source code.
- Working multi-card AWT interface.
- Sample order and generated bill.
- Screenshot of each card/screen.
- Brief explanation of CardLayout, AWT components, and event handling.

Evaluation Rubric

Criterion	Weightage	Marks / Remarks
Problem Understanding	15%	
GUI Components and Layout	20%	
Event Handling	20%	
Functional Correctness	25%	
Input Validation and User Experience	10%	
Program Explanation / Viva	10%	

Student Instructions

1. The solution must be implemented in Java using the concepts covered in the laboratory syllabus.
2. Students should demonstrate compilation, execution, and output during the practical session.
3. Use meaningful variable names and appropriate comments.
4. Students must be able to explain the selected AWT components, layout manager, event handling mechanism, and processing logic.

CODE:

```
import java.awt.*;
import java.awt.event.*;

class FoodOrdering extends Frame implements ActionListener
